

Gold standard for Yamaha

A Yamaha AFC3 system has been installed at the Riksteatret theatre's HQ in Oslo's Nydalen district. Established in 1949, Riksteatret is Norway's national touring theatre and an offshoot of the Norwegian government's Ministry of Culture.

Productions are developed and previewed in two venues at the Nydalen complex, the 300-seat Store Gull (Large Gold) and 120-seat Lille Gull (Little Gold).

Store Gull had a very dry acoustic response, the reverb time being as little as 0.56s. Yamaha AFC tuning partner Panpot installed three AFC3 processors, with five Yamaha XMV8140 and one XMV4140 power amplifiers, in Store Gull. These drive 50 loudspeakers - 24 ceiling speakers and four flatpanel speakers at the mixing desk position for reverb, plus 18 wall units and four subs for early

reflection, reverb and 7:1 surround.

Jo Wang, acoustic engineer at Panpot Acoustic Systems, commented: "The AFC3 system has transformed Store Gull. It makes the acoustics feel incredibly natural, even with the PA in use."

New Partners

Symetrix has been added to Audio-Technica Europe's (ATE) distribution portfolio for Turkey as both companies seek to strengthen their presence across the country's professional installation sector. ATE business development manager Onur Esame said: "Symetrix would be a perfect fit to support our existing product range".
